

## *Revolutionizing how Resiliency is Addressed in Schools*

**Executive Summary:** Terrace Metrics, Inc., (TM) helps schools measure all students' resiliency, manage students identified as needing additional resources, and monitor individual and school progress. The company is the only entity that provides a comprehensive analysis of the most robust, empirically supported indicators of resiliency and adversity across a wide grade range (grades 3-12). **These results are linked to an empirically based curriculum that corresponds to Tier I, Tier II, and Tier III services.** Terrace Metrics provides school personnel with the knowledge to design, implement and evaluate prevention and intervention programs with little effort and high effectiveness.

In just 15 minutes, students complete the resiliency assessment and the results are immediately provided to members of the school's response team (counselors, social workers, etc.), who are trained extensively on the software. These results are converted into several products, including parent reports and resources as well as a comprehensive school and district report. Schools that use TM can quickly identify and attend to students who are at the lower end of the resiliency/wellness continuum and formulate strategies to advance students higher in the continuum. TM provides features that are not found elsewhere:

- **Completely Turnkey:** No preparation needed by schools
- **Immediate Results:** student, parent, and school-level data immediately generated and retrieved
- **Data Security Highest Priority:** TM exceeds security standards. It is fully FERPA/COPPA compliant
- **Fully Conforms to the MTSS Framework:** Data and resources enable schools to design and monitor Tier I, Tier II, and Tier III strategies
- **The Most Comprehensive Service at the Lowest Cost:** Our advanced software systems enable us to provide high quality products and services that are affordable for any school

The data generated by Terrace Metrics has been validated against actual GPA (from school records), standardized test scores (e.g., ACT, SAT), state test scores (e.g., MAP testing) and multiple sources of behavioral data (e.g., school suspension, tardiest/absences, total number of office referrals, etc.).

Our groundbreaking, user-friendly software assesses the most robust predictors of interpersonal and intrapersonal functioning, both of which are vital components of current and future academic success. All indicators within the system have strong empirical evidence, are normed, and provide a psychometrically sound perspective of a student's strength or deficiency. These results are directly linked to effective parent and educator-based videos, empirically based curricula, and other essential resources that provide straightforward and practical suggestions for improvement or intervention.

More important, TM actively partners with each district and school through every step in the process. Our administrators provide in-person training to those who will use the software, and it provides immediate and live support (and onsite assistance if requested). The process is easy to understand and highly utilized by schools and parents. Further, the process is efficient, requiring little of school resources and is financially sensible for all types of school districts.

**Implementation:** TM provides a subscription service to school districts or independent schools. Our low price per student allows districts and individual schools unlimited access to its software and all resources for the term. There are no hidden charges or tiered pricing. TM is the only company that provides student-level data, parent reports and resources, an aggregated school report, and a district report. Feedback from partners attest that the services provided by TM are the most affordable, comprehensive and useful to schools, parents and students. Please see testimonial videos on its website ([www.terracedmetrics.org/schools](http://www.terracedmetrics.org/schools))
