

# Boost on-time graduation with automated credit monitoring

Graduation pathways and requirements are more complex than ever. And until now, ensuring students are on track has been an error-prone process of checking binder after binder of transcripts and schedules. There's a better way.

## Mesa Cloud automates graduation progress tracking to ensure every student is ready to succeed

✓ Instantly identify transcript, schedule, or pathway errors

✓ Quickly uncover issues in real time through daily syncs with your SIS

✓ Efficiently monitor multiple graduation paths aligned to district requirements

### Because your passion is working with students, not transcripts

With a national average of 400+ students for every counselor and the complexity of graduation requirements, it's no wonder that counselors have little time to work directly with students. Often, they spend more time climbing a mountain of paperwork, worried they'll miss an error that keeps a student from graduating.

### Imagine if counselors had more time to impact students' lives

With Mesa Cloud, counselors can stop stressing and get back to helping students explore interests, define career paths, and address social-emotional needs so they're ready to learn. And district leaders can be sure they have the best system to meet state requirements, reach graduation goals, and deliver positive results to their board and community.

Join over 40 district partners that have chosen a better path to graduation and student success

PHARR-SAN JUAN-ALAMO Independent School District

### Because senior year is not the time to discover transcript errors

"Mesa is taking that human transcript auditing need and putting it into software to double-check for you. That was our biggest need... software to help our counselors identify the mistakes that they kept missing."

- Kristy Newitt, Counseling Coordinator, Cumberland County Schools (NC)
