

A few things that make CIM unique...

1. Unique, branded name

- CIM is nationally known in the concrete industry and MTSU is the flagship campus with alumni that have now been in the industry 15+ years.
- With over 1,200 alumni in the industry, MTSU CIM is recognized from California to New York.
- CIM has over 25 scholarships for majors and awards over \$100,000 per year to students.

2. Job assistance

- CIM has a Marketing & Recruiting Coordinator, giving students the ability to connect you with opportunities all over the U.S. and even globally.
- CIM hosts a Networking Event each fall and Tabling Tuesday each spring to connect students with employers.
- Employers come on campus often to brand their companies and interview students.

3. Great starting salary (and it only goes up from there!)

- The average salary for MTSU CIM graduates right out of school is \$75,500, making CIM among the top highest paid majors at MTSU.

4. Diverse types of jobs

- With concentrations in Concrete Contracting and in Production, Sales & Service, the types of jobs available upon graduation are vast and the job functions vary widely.
- Jobs posted last semester including sales of concrete (and related) products, superintendent trainee, quality assurance, dispatcher, estimator, lab technician, batch plant engineer, project manager, materials engineer, concrete engineer, physical chemist, production manager, managing editor, plant supervisor, cad drafter, plant manager, and operations manager.

5. Hands-on experience

- Students are required to conduct an internship to graduate and earn two ACI certifications while in the program.
- In addition, there are many other opportunities to gain the hands-on experience that makes graduates marketable to the industry upon graduation. CIM courses often include plant tours, guest lecturers from the industry, and even concrete pours on-campus and student competitions teams.

6. Student perks

- CIM is fortunate to have a lot of support from the concrete industry and have extra funds to help students get involved, network, and be successful by attending many well know conferences, World of Concrete, National Ready Mix Concrete Association, American Society of Concrete Contractors, The Precast Show, American Concrete Institute and many student competitions.
- We often have employers come to campus to hire interns or full-time employees and they will usually treat a group of students to dinner to talk about their company.
- We offer all CIM students the opportunity to travel at least once during their college career to network at a conference or seminar, funded by the CIM Patrons and the Concrete Industry. The industry also supports several competitions to enhance students further knowledge with hands on experience.
