

Explore Army Civilian STEM Careers.

The US Army provides students a portfolio of academic programs to help students improve their standardized test scores, and STEM skills. Since the US Army has a growing need for STEM technicians, and general workers within several other career fields, it offers students (from elementary through graduate school) a wide range of educational activities, competitions, internships, fellowships, and scholarships.

These programs will help students choose a career path either military or non-military related and provide information on a variety of financial aid opportunities.

For more information, please contact Lieutenant Colonel Adam Phearsdorf at (517) 887-5772 or adam.r.phearsdorf.mil@army.mil
